## FST3345－8－Bit Bus Switch

## Features

－ $4 \Omega$ Switch Connection between Two Ports
－Minimal Propagation Delay through the Switch
－Low $\mathrm{I}_{\mathrm{Cc}}$
－Zero Bounce in Flow－through Mode
－Control Inputs Compatible with TTL Level

## Description

The FST3345 switch provides eight－bits of high－speed CMOS TTL－compatible bus switching．The low on resistance of the switch allows inputs to be connected to outputs without adding propagation delay or generating additional ground bounce noise．

The device is organized as an eight－bit switch with dual output enable inputs（OE and／OE）．When／OE is LOW or OE is HIGH，the switch is ON and port A is connected to port B．When／OE is HIGH，and OE is LOW，the switch is OPEN and a high－impedance state exists between the two ports．

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

## Note:

4. This parameter is guaranteed by design, but is not tested. The bus switch contributes no propagation delay other than the RC delay of the typical on resistance of the switch and the 50 pF load capacitance when driven by an ideal voltage source (zero output impedance).

## Capacitance

$\mathrm{T}_{\mathrm{A}}=+25^{\circ} \mathrm{C}, \mathrm{f}=1 \mathrm{MHz}$. Capacitance is characterized, but not tested.

## ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Antr-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our extemal nebsite, whw.fairchildsemi.com, under Sales Support.
Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly fromFairchild or from Authorized Fairchild Distributors who are listed by country on our neb page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceabiity, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and vill appropriately address ary warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is commited to corrbat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
