PIN FUNCTIONS

Pin	Function
PROG	Clock input from MSM80C49. When PROG is changed from "H" to "L", MSM82C43 STARTS operating in accordance with an order from MSM80C49.
\overline{CS}	Input for chip select. Outputs and internal status cannot be changed when \overline{CS} is "H".
P20 – P23	4-bit bidirectional I/O ports. When connected to P20 thru P23 of MSM80C49, direct data transfer from port to accumulator and from accumulator to port is possible.
P40 – P43 P50 – P53 P60 – P63 P70 – P73	4-bit bidirectional I/O ports. Data is latched statistically when output to ports, but is only valid while PROG is at "L" level when input.
VCC	+5V power supply
GND	GROUND

FUNCTIONS

• Write mode

Execution of MOVDpp, A, ORLDpp, A, ANLDpp, and A by MSM80C49 enables direct output of accumulator contents to ports 4 thru 7, and output to the ports after ORing or ANDing with port data. The port data is latched statistically at this time and remains unchanged until execution of the next instruction.

level. When at "H" level, ports 4 thru 7 are switched to tristate and port 2 is switched to input mode.

• Address and instruction code

Instruction	P23	P22	Port	P21	P20
Read	0	0	Port 4	0	0
Write	0	1	Port 5	0	1
OR	1	0	Port 6	1	0
AND	1	1	Port 7	1	1

• Read mode

Execution of MOVDA and Pp results in data of ports 4 thru 7 being accepted by the accumulator. Note that port data is valid only while PROG is at "L"
