SN65555, SN65556, SN75555, SN75556
ELECTROLUMINESCENT COLUMN DRIVERS

SLDS031A − APRIL 1985 − REVISED APRIL 1993

- **Each Device Drives 32 Electrodes**
- **90-V Output Voltage Swing Capability Using Ramped Supply**
- **15-mA Output Source and Sink Current Capability**
- **High-Speed Serially-Shifted Data Input**
- **Totem-Pole Outputs**
- **Latches on All Driver Outputs**

description

The SN65555, SN75555, SN65556, and SN75556 are monolithic BIDFET† integrated circuits designed to drive the column electrodes of an electroluminescent display. The SN65556 and SN75556 output sequence is reversed from the SN65555 and SN75555 for ease in printed-circuit-board layout.

The devices consist of a 32-bit shift register, 32 latches, and 32 output AND gates. Serial data is entered into the shift register on the low-to-high transition of CLOCK. When high, LATCH ENABLE transfers the shift register contents to the outputs of the 32 latches. When OUTPUT ENABLE is high, all Q outputs are enabled. Data must be loaded into the latches and OUTPUT ENABLE must be high before supply voltage V_{CC2} is ramped up.

Serial data output from the shift register can be used to cascade shift registers. This output is not affected by LATCH ENABLE or OUTPUT ENABLE.

The SN65555 and SN65556 are characterized for operation from −40°C to 85°C. The SN75555 and SN75556 are characterized for operation from 0°C to 70°C.

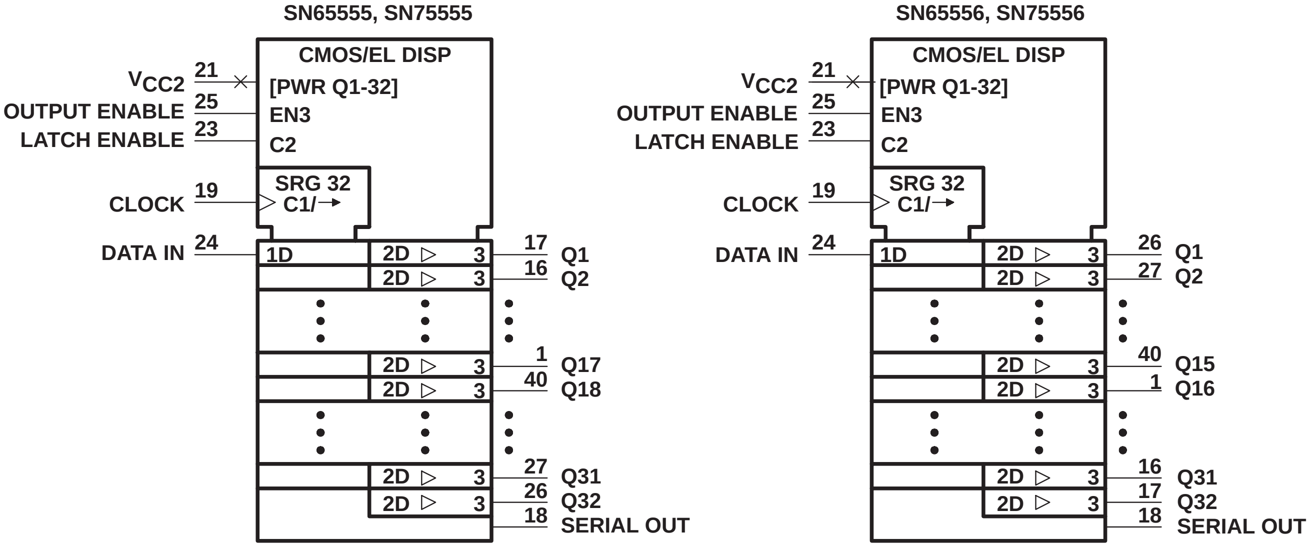
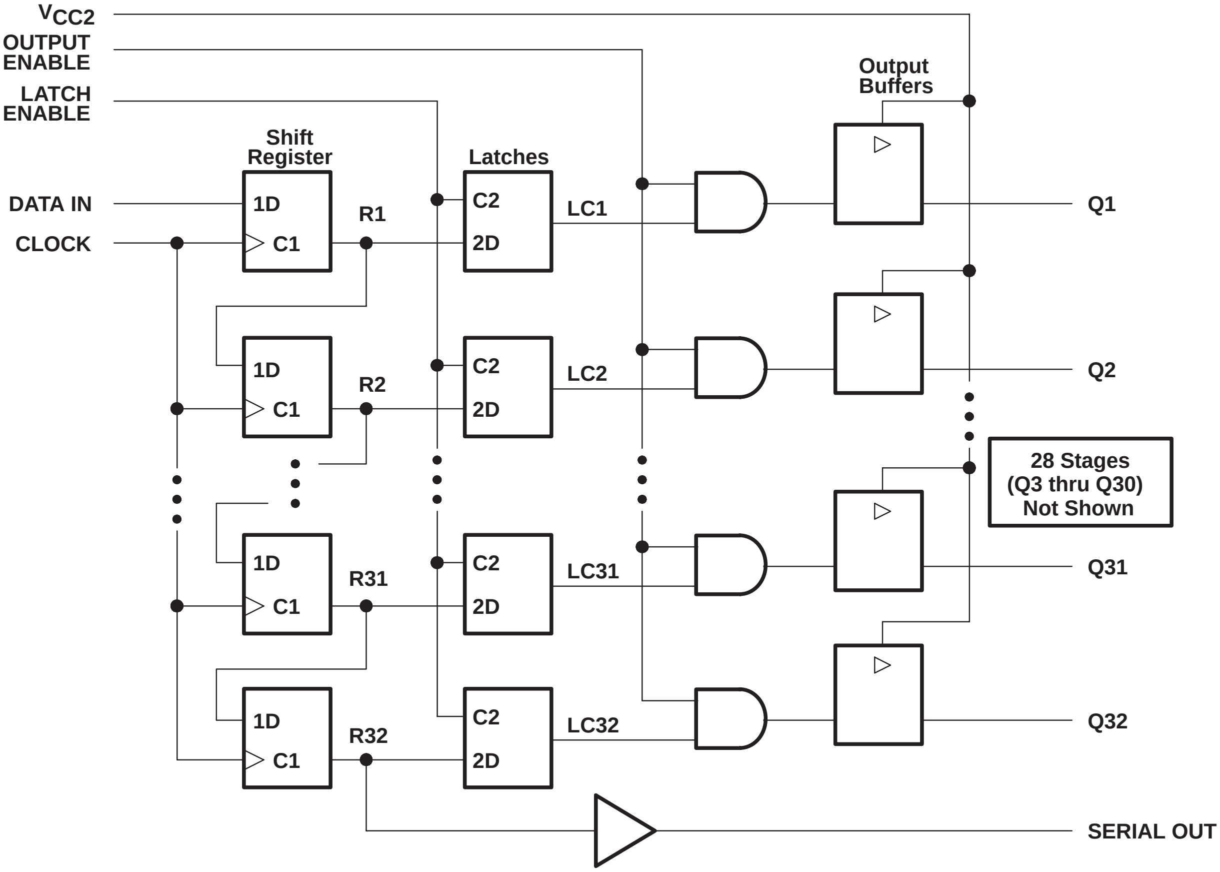
logic symbols†



† These symbols are in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.
Pin numbers shown are for N packages.

logic diagram (positive logic)



FUNCTION TABLE

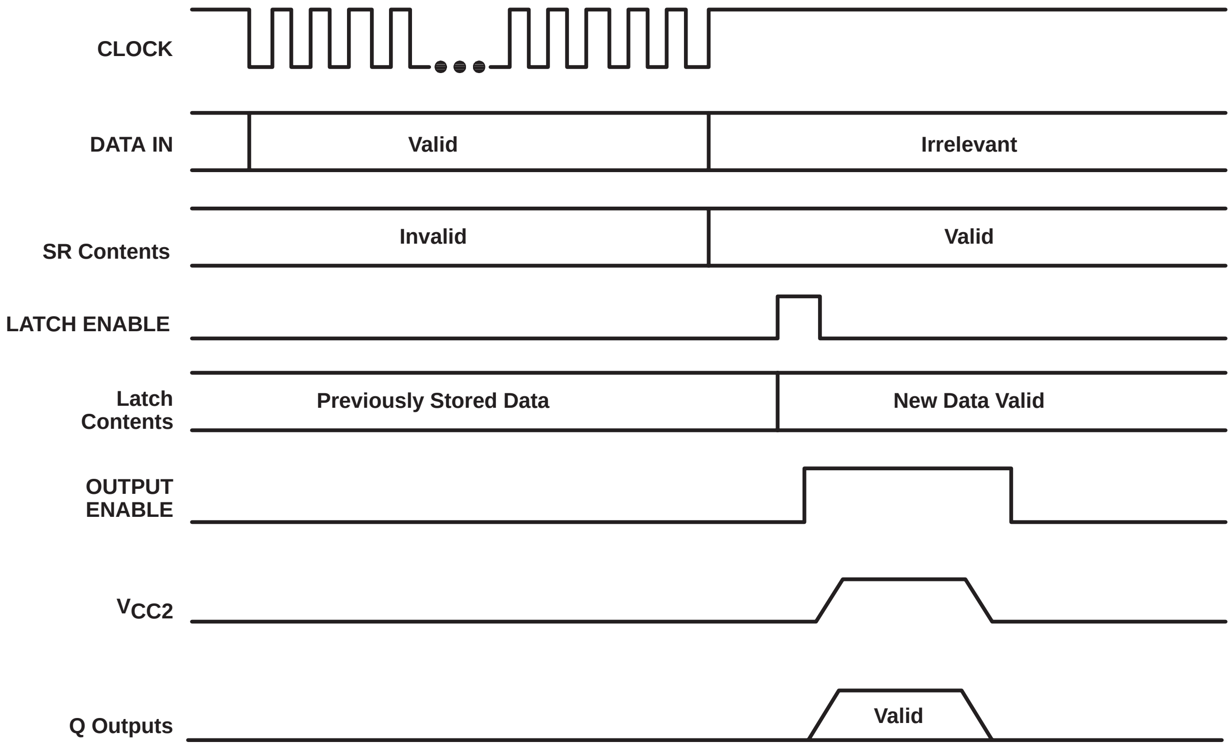
FUNCTION	CONTROL INPUTS			SHIFT REGISTER R1 THRU R32	LATCHES LC1 THRU LC32	OUTPUTS	
	CLOCK	LATCH ENABLE	OUTPUT ENABLE			SERIAL	Q1 THRU Q32
Load	↑ No↑	X X	X X	Load and shift† No change	Determined by LATCH ENABLE‡	R32 R32	Determined by OUTPUT ENABLE
Latch	X X	L H	X X	As determined above	Stored data New data	R32	Determined by OUTPUT ENABLE
Output Enable	X X	X X	L H	As determined above	Determined by LATCH ENABLE‡	R32 R32	All L LC1 thru LC21, respectively

H = high level, L = low level, X = irrelevant, ↑ = low-to-high-level transition.

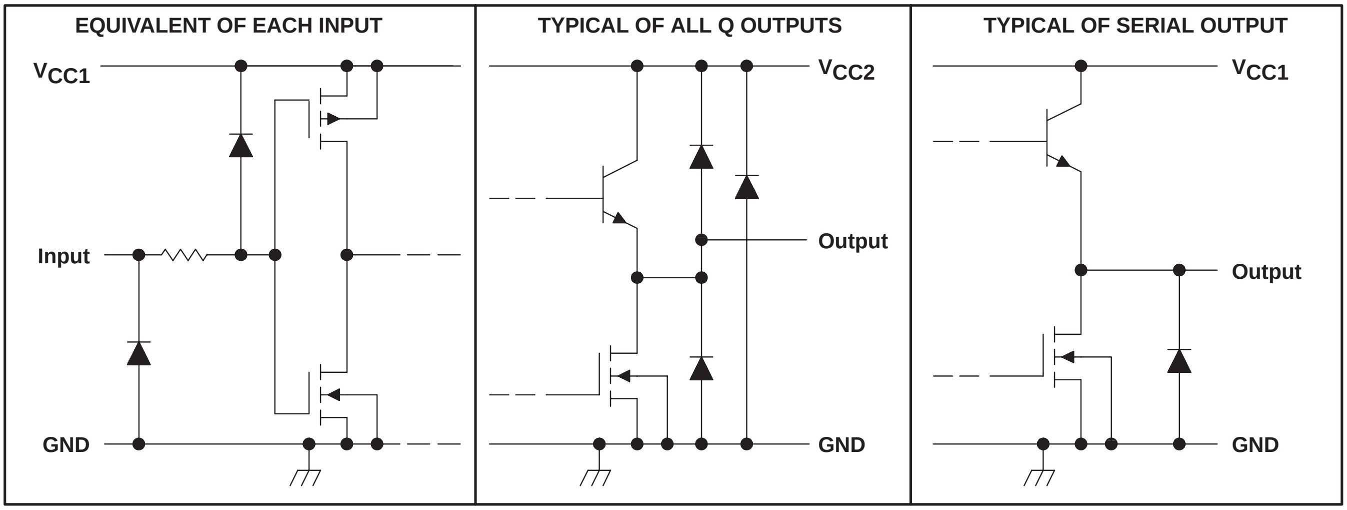
† R32 and the serial output take on the state of R31, R31 takes on the state of R30,. . .R2 takes on the state of R1, and R1 takes on the state of the data input.

‡ New data enter the latches while LATCH ENABLE is high. These data are stored while LATCH ENABLE is low.

typical operating sequence



schematic of inputs and outputs



absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage, V_{CC1} (see Note 1)		18 V
Supply voltage, V_{CC2} (see Note 2)		90 V
Input voltage, V_I		V_{CC1} + 0.3 V
Ground current		700 mA
Continuous total power dissipation		See Dissipation Rating Table
Operating free-air temperature range, T_A:	SN65555, SN65556	− 40°C to 85°C
	SN75555, SN75556	0°C to 70°C
Storage temperature range, T_{stg}		−65°C to 150°C
Case temperature for 10 seconds: FN package		260°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds: N package		260°C

NOTES: 1. Voltage values are with respect to network GND.
2. These devices have been designed to be used in applications in which the high-voltage supply, V_{CC2}, is switched to GND before changing the state of the outputs.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25°C$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25°C$	$T_A = 70°C$ POWER RATING	$T_A = 85°C$ POWER RATING
FN	1700 mW	13.6 mW/°C	1088 mW	884 mW
N	1250 mW	10.0 mW/°C	800 mW	650 mW

recommended operating conditions

		MIN	NOM	MAX	UNIT
Supply voltage, V_{CC1}		10.8	12	15	V
Supply voltage, V_{CC2}		0		80	V
High-level input voltage, V_{IH} (see Figure 1)	V_{CC1} = 10.8 V	8.1		11.1	V
	V_{CC1} = 15 V	11.25		15.3	
Low-level input voltage, V_{IL} (see Figure 1)	V_{CC1} = 10.8 V	−0.3[†]		2.7	V
	V_{CC1} = 15 V	−0.3[†]		3.75	
High-level output current, I_{OH}				−15	mA
Low-level output current, I_{OL}				15	mA
Output clamp current, I_{OK}				20	mA
Clock frequency, f_{clock}		0		6.25	MHz
Pulse duration, CLOCK high or low, $t_{w(CLK)}$ (see Figure 2)		80			ns
Pulse duration, LATCH ENABLE, $t_{w(LE)}$		80			ns
Setup time, t_{su}	DATA IN before CLOCK ↑ (see Figure 2)	20			ns
	OUTPUT ENABLE before V_{CC2}↑ (see Figure 4)	500			
Hold time, t_h	DATA IN after CLOCK ↑ (see Figure 2)	80			ns
	OUTPUT ENABLE after V_{CC2}↑ (see Figure 4)	100			
Rate of rise for V_{CC2}, dv/dt				80	V/µs
Operating free-air temperature, T_A	SN65555, SN65556	−40		85	°C
	SN75555, SN75556	0		85	

[†] The algebraic convention, in which the least positive (most negative) value is designated as minimum, is used in this data sheet for logic voltage levels.

electrical characteristics over recommended operating free-air temperature range, V_{CC1} = 12 V, V_{CC2} = 80 V

PARAMETER			TEST CONDITIONS	MIN	MAX	UNIT
V_{OH}	High-level output voltage	Q outputs	$I_O = -15$ mA	77		V
		SERIAL OUT	$I_O = -100$ µA	10.5		
V_{OL}	Low-level output voltage	Q outputs	I_{OL} = 15 mA		8	V
		SERIAL OUT	I_{OL} = 100 µA		1	
I_{IH}	High-level input current		V_I = 12 V		1	µA
I_{IL}	Low-level input current		V_I = 0		−1	µA
I_{CC1}	Supply current from V_{CC1}				2	mA
I_{CC2}	Supply current from V_{CC2}				5	mA

switching characteristics, V_{CC1} = 12 V, T_A = 25°C

PARAMETER		TEST CONDITIONS	MIN	MAX	UNIT
t_{PHL}	Propagation delay time, high-to-low-level, SERIAL OUT from CLOCK	C_L = 20 pF to GND, V_{CC2} = 0, See Figure 3		140	ns
t_{PLH}	Propagation delay time, low-to-high level, SERIAL OUT from CLOCK			140	ns
t_d	Delay time, V_{CC2} to Q outputs	dv/dt = 80 V/µs, See Figure 4		100	ns

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI’s standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
