Video control combination circuit with automatic cut-off control

TDA3508

FEATURES

- Capacitive coupling of the colour difference and luminance input signals with black level clamping in the input stages
- Linear saturation control acting on the colour difference signals
- (G–Y) and RGB matrix
- Linear transmission of inserted signals
- Equal black levels for inserted and matrixed signals
- Three identical channels for the RGB signals
- Linear contrast and brightness controls, operating on both the inserted and matrixed RGB signals
- Peak beam current limiting input
- Clamping, horizontal and vertical blanking of the three input signals controlled by a 3-level sandcastle pulse
- Three DC gain controls for the RGB output signals (white point adjustment)
- Emitter-follower outputs for driving the RGB output stages
- Input for automatic cut-off control with compensation for leakage current of the picture tube.

GENERAL DESCRIPTION

The TDA3508 is an integrated circuit which performs video control functions in a PAL/SECAM decoder for negative colour difference signals $-(R-Y)$ and $-(B-Y)$.

The required input signals are luminance and colour difference and a 3-level sandcastle pulse for control purposes. Linear RGB signals can be inserted from an external source. RGB output signals are available for driving the video output stages. The circuit provides automatic cut-off control of the picture tube.

ORDERING INFORMATION

TYPE NUMBER	PACKAGE		
	NAME	DESCRIPTION	VERSION
TDA3508	DIP28	plastic dual in-line package; 28 leads (600 mil)	SOT117-1

Video control combination circuit with automatic cut-off control

PINNING

SYMBOL	PIN	DESCRIPTION
RO	1	red output
CGC	2	green storage capacitor for cut-off control
GO	3	green output
CBC	4	blue storage capacitor for cut-off control
BO	5	blue output
V _P	6	supply voltage (+12 V)
CB	7	blue storage capacitor for brightness
CG	8	green storage capacitor for brightness
CR	9	red storage capacitor for brightness
SC	10	sandcastle pulse input
FSW	11	fast switch for RGB inputs
BI	12	blue input (external signal)
GI	13	green input (external signal)
RI	14	red input (external signal)
Y	15	luminance input
SAT	16	saturation control input
-(R-Y)	17	colour difference input
-(B-Y)	18	colour difference input
CON	19	contrast control input
BRI	20	brightness control input
WPB	21	white point adjustment input; blue
WPG	22	white point adjustment input; green
WPR	23	white point adjustment input; red
GND	24	ground (0 V)
PBL	25	control input for peak beam current limiting
ACO	26	automatic cut-off control input
CSL	27	storage capacitor for leakage current
CRC	28	red storage capacitor for cut-off control

TDA3508

LIMITING VALUES

In accordance with the Absolute Maximum Rating System (IEC 134).

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
V_P	supply voltage on pin 6		0	13.2	V
V_n	input voltage on pins 10, 21, 22, 23, 25 and 26		0	V_P	V
V_{11}	input voltage on pin 11		-0.5	+3.0	V
$V_{16,19,20}$	input voltage on pins 16, 19 and 20		0	$0.5V_P$	V
V_{n1}	voltage on pins 1 to 5, 7 to 9, 12 to 15, 17, 18, 27 and 28	no external DC voltage			V
$I_{1,3,5}$	output current on pins 1, 3 and 5		-	-3	mA
I_{19}	input current on pin 19		-	10	mA
I_{20}	input current on pin 20		-	5	mA
I_{25}	input current on pin 25		-5	-	mA
P_{tot}	total power dissipation		-	1.7	W
T_{amb}	operating ambient temperature		0	70	°C
T_{stg}	storage temperature		-25	+150	°C
V_{es}	electrostatic handling voltage;				
	pin 10	note 1	-500	+450	V
	all other pins	note 1	-500	+500	V

Note

- Equivalent to discharging a 200 pF capacitor via a 0 Ω series resistor.

		no keying; note 10	–	–	1.0	V
I ₁₀	input current		–	–	–110	μA

Notes

- Maximum value <110 mA after warm-up.
- Values are proportional to the supply voltage.
- Matrixed according to equation $V_{(G-Y)} = -0.51V_{(R-Y)} - 0.19V_{(B-Y)}$.
- When $V_{11-24} < 0.4$ V during clamping time, the black levels of the inserted RGB signals are clamped on the black levels of the internal RGB signals. When $V_{11-24} > 0.9$ V during clamping time, the black levels of the inserted RGB signals are clamped on an internal DC voltage (correct clamping of the external RGB signals is possible only when they are synchronous with the sandcastle pulse).
- When pins 21, 22 and 23 are not connected, an internal bias voltage of 5.5 V is supplied.
- Automatic cut-off control measurement occurs in the following lines after start of the vertical blanking pulse:
 - line 20: measurement of leakage current (R + G + B).
 - line 21: measurement of red cut-off current.
 - line 22: measurement of green cut-off current.
 - line 23: measurement of blue cut-off current.
- Black level of the measured channel is nominal; the other two channels are blanked to ultra-black.
- All three channels blanked to ultra-black. The cut-off control cycle occurs when the vertical blanking part of the sandcastle pulse contains more than 3 line pulses. The internal blanking continues until the end of the last measured line. The vertical blanking pulse is not allowed to contain more than 34 line pulses, otherwise another control cycle begins.
- Input pin 26 switches to ground during horizontal flyback.
- The sandcastle pulse is compared with three internal thresholds (proportional to V_P) and the given levels separate the various pulses.
- Blanked to ultra-black (–25%).
- Pulse duration ≥ 3.5 μs.

SOLDERING

Introduction

There is no soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and surface mounted components are mixed on one printed-circuit board. However, wave soldering is not always suitable for surface mounted ICs, or for printed-circuits with high population densities. In these situations reflow soldering is often used.

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "IC Package Databook" (order code 9398 652 90011).

Soldering by dipping or by wave

The maximum permissible temperature of the solder is 260 °C; solder at this temperature must not be in contact with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds.

The device may be mounted up to the seating plane, but the temperature of the plastic body must not exceed the specified maximum storage temperature ($T_{stg\ max}$). If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature within the permissible limit.

Repairing soldered joints

Apply a low voltage soldering iron (less than 24 V) to the lead(s) of the package, below the seating plane or not more than 2 mm above it. If the temperature of the soldering iron bit is less than 300 °C it may remain in contact for up to 10 seconds. If the bit temperature is between 300 and 400 °C, contact may be up to 5 seconds.

DEFINITIONS

Data sheet status	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
Limiting values	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
Application information	
Where application information is given, it is advisory and does not form part of the specification.	

LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.
